

EAVESDROPPING PROTECTION BOX – Ultrasound

protects cell phones and PDAs from electronic eavesdropping

Cell phones, PDAs, Blackberries, etc. are preferred targets when it comes to illegal information gathering. This box reliably protects against malware that can be obtained via the Internet today.

Function:

- The box is flooded with **ultrasonic noise** (noise inaudible to the human ear), preventing eavesdropping by means of malicious software or tampered hardware.
- No missed calls; the phone's display is always visible, allowing you to decide whether to answer the call.
- Portable and easy to use; multiple cell phones or PDAs can be protected simultaneously.
- Powered by battery or AC adapter.
- Ideal for conferences and all situations where a tampered cell phone can cause great damage.
- Frequency optimized noise in the ultrasonic range safely covers all frequencies of the human voice.

Application:

- Connect the plug-in power supply to the eavesdropping protection box.
- Switch on the ultrasonic generator in the box.
- Put cell phones into the protection box. Once the microphone of the phone or PDA is activated illegally, it transmits only the noise and not the speech from the conference room.

Spezifikation:

| | |
|------------------|--|
| Power supply: | built-in Li-Pol battery, 4100mAh or 5V / 2A USB plug-in power adapter |
| Frequency range: | 24 to 26 kHz, complex structured ultrasonic sound |
| Battery life: | approx. 4 hours continuous operation |
| Dimensions: | 330 x 220 x 88 mm |
